This text offers a complete picture of the process of individual garment construction following the exact techniques used in the industry. The unique feature of this book is its presentation of each garment as a whole concept. With numerous diagrams and easy-to-follow instructions, students master the principles of design and flat pattern to create an individual item of apparel. Each chapter begins with the introduction of a basic sloper and follows with an explanation of the whole production process-making a garment from pattern drafting to garment construction, including lining, interfacing and markers. The balance of each chapter covers techniques for altering separate pattern pieces.

Fashion is a lot more than providing an answer to primary needs. It is a way of communication, of distinction, of proclaiming a unique taste and expressing the belonging to a group. Sometimes to an exclusive group. Currently, the fashion industry is moving towards hyperspace, to a multidimensional world that is springing from the integration of smart textiles and wearable technologies. It is far beyond aesthetics. New properties of smart textiles let designers experiment with astonishing forms and expressions. There are also surprising contrasts and challenges: a new life for natural fibers, sustainable fabrics and dyeing techniques, rediscovered by eco-fashion, and "artificial apparel," made of wearable electronic components. How is this revolution affecting the strategies of the fashion industry?
