This repository contains the LaTeX text of the EPICS Application Developers Guide, and older versions of the Channel Access Protocol Specification. The master version of the latter has now been converted to a restructured text file in the specs directory of the epics-docs repository on GitHub. The Makefile in this directory generates both HTML and PDF versions of the Developers Guide and can rsync them into a directory set by the INSTALL_DIR variable. make all will generate the files, make ...

Content Description #Includes bibliographical references and index.

This book is designed to help project managers with a traditional, plan-driven project management background understand the challenges of implementing agile and to develop a more adaptive project management approach. Content is organized into 5 sections: fundamental of agile, agile processes and tools, making agile work for business, implementing agile at the enterprise level, and case studies. It can be used to study for PMI's newly founded ACP exam.

This manual describes a set of Application Source/Release Control tools (appSR) that can be used to develop software for EPICS based control systems. The Application Source/Release Control System (appSR) has been unbundled from base EPICS and is now available as an EPICS extension. Due to this unbundling, two new directories must be added to a user's path (see section "Environment" on page 3 for more information) and a new command getapp must be issued after the getrel command to get a specific version of appSR (see section "Creating The Initial Application System Area" on page 7 for more information). It is now required that GNU make version 3.71 or later be used for makes instead of SUN make. Users should now type gmake instead of make.
