Evaluation is a systematic determination of a subject's merit, worth and significance, using criteria governed by a set of standards. It can assist an organization, program, design, project or any other intervention or initiative to assess any aim, realisable concept/proposal, or any alternative, to help in decision-making; or to ascertain the degree of achievement or value in regard to the aim and objectives and results of any such action that has been completed. The primary purpose of evaluation is to provide information that can be used to improve the design, implementation, effectiveness, and efficiency of social programs.

The second edition of Patton's classic text retains the practical advice of the original. It shows how to conduct an evaluation in a way that will be useful -- and actually used. Patton has included new stories, new examples, new research findings, and more of his evaluation humour. He adds to the original book's insights into the changes in evaluation during the past decade and incorporates recent research on utilization.

How do we know which social and economic policies work, which should be continued, and which should be changed? Jim Manzi argues that throughout history, various methods have been attempted -- except for controlled experimentation. Experiments provide the feedback loop that allows us, in certain limited ways, to identify error in our beliefs as a first step to correcting them. Over the course of the first half of the twentieth century, scientists invented a methodology for executing controlled experiments to evaluate certain kinds of proposed social interventions. This technique goes by many names in different contexts (randomized control trials, randomized field experiments, clinical trials, etc.). Over the past ten to twenty years this has been increasingly deployed in a wide variety of contexts, but it remains the red-haired step child of modern social science. This is starting to change, and this change should be encouraged and accelerated, even though the staggering complexity of human society creates severe limits to what social science could be realistically expected to achieve. Randomized trials have shown, for example, that work requirements for welfare recipients have succeeded like nothing else in encouraging employment, that charter school vouchers have been successful in increasing educational attainment for underprivileged children, and that community policing has worked to reduce crime, but also that programs like Head Start and Job Corps, which might be politically attractive, fail to attain their intended objectives. Business leaders can also use experiments to test decisions in a controlled, low-risk environment before investing precious resources in large-scale changes -- the philosophy behind Manzi's own successful software company. In a powerful and masterfully-argued book, Manzi shows us how the methods of science can be applied to social and economic policy in order to ensure progress and prosperity.

Restorative justice is one of the most talked about developments in the field of crime and justice. Its advocates and practitioners argue that state punishment, society's customary response to crime, neither meets the needs of crime victims nor prevents reoffending. In its place, they suggest, should be restorative justice, in which families and communities of offenders encourage them to take responsibility for the consequences of their actions, express repentance and repair the harm they have done. First published in 2002, *Restorative Justice: Ideas, Values, Debates* is renowned worldwide as an accessible, balanced and invaluable analysis of the argument that restorative justice can provide an attractive alternative to traditional responses to crime. The second edition includes a new chapter identifying and analyzing fundamental shifts and developments in restorative justice thinking over the last decade. It suggests that the campaign for restorative justice has not only grown rapidly in the last decade, but has also changed in its focus and character. What started as a campaign to revolutionize criminal justice has evolved into a social movement that aspires to implant restorative values into the fabric of everyday life. This new edition explores the implications of this development for restorative justice's claim to provide a feasible and desirable alternative to mainstream thinking on matters of crime and justice. This book provides an essential introduction to the most fundamental and distinctive ideas of restorative justice and will appeal to students of criminology, law or related disciplines or researchers and professionals with an interest in crime and justice issues. In addition it extends the debate about the meaning of restorative justice – pros, cons and wider significance – hence it will also be of interest to those already familiar with the topic.

Provides a formal theory of nonmarket failure, analyzing such problems as redundant costs, monopoly, frequency of unanticipated externalities, and bureaucracy in such nonmarket institutions as foundations, universities, and government. A theory of market failures is well established in economics, but the same has not been true for the study of nonmarket failures. Markets or Governments remedies this situation by providing a formal theory of nonmarket failure, analyzing such problems as redundant costs, monopoly, frequency of unanticipated externalities, and bureaucracy in such nonmarket institutions as foundations, universities, and government. This new edition updates the data and results contained in the first edition and includes references and applications of the theory to the ongoing process of system transformation in Russia, Ukraine, and Eastern Europe. The discussion of earlier literature that is relevant to the theory of nonmarket failure has been expanded.
