This package includes both HM ClassPrep and HM Testing. It allows an instructor to access both lecture aids and testing software in one place. These components cannot be ordered separately. HM ClassPrep offers instructors everything they need to develop their lectures—PowerPoint slides with all line art from the text, Word and PDF files of the Instructor's Resource Guide and Instructor's Resource Guide for the Lab Manual, and Word files of the Test Bank. The Instructor's Resource Guide offers a transition guide, tables suggesting the approximate number of lectures to devote to each chapter, summaries of the worked examples and problems, a chapter-by-chapter outline listing those sections that are most important as well as those that may be skipped or assigned as optional, and answers to the review problems on synthesis featured in the Study Guide and Solutions Manual. The Instructor's Guide for the Lab Manual contains detailed discussions of the experiments in the laboratory manual and answers to the laboratory questions. The Test Bank includes approximately 730 multiple-choice test questions with an accompanying answer key. HM Testing by Diploma combines a flexible test-editing program with a comprehensive gradebook function for easy administration and tracking. HM Testing enables instructors to administer tests via print, network server, or the web. Questions can be customized based on the chapter being covered, the question format, level of difficulty, and specific topics. HM Testing provides for the utmost security in accessing both test questions and grades.

The Zumdahls' hallmark problem-solving approach and focus on conceptual development come to life in this new edition with interactive problems that promote active learning and visualization. Enhanced by a wealth of online support that is seamlessly integrated with the program, Chemistry's solid explanations, emphasis on modeling, and outstanding problem sets make both teaching and learning chemistry more meaningful and accessible than ever before. The authors emphasize a qualitative approach to chemistry in both the text and the technology program before quantitative problems are considered, helping to build comprehension. The emphasis on modeling throughout the narrative addresses the problem of rote memorization by helping students to better understand and appreciate the process of scientific development. By stressing the limitations and uses of scientific models, the authors show students how chemists think and work.
