Guest edited by Drs. Daniel J. Wallace and R. Swamy Venuturupalli, this issue of Rheumatic Disease Clinics will cover several key areas of interest related to Best Practices and Challenges to the Practice of Rheumatology. This issue is one of four selected each year by our series Consulting Editor, Dr. Michael Weisman of Cedars-Sinai. Articles in this issue include, but are not limited to: The Economics of Rheumatology Practice in the United States, Manpower trends in rheumatology, Challenges to practicing rheumatology in an academic center, Challenges in practicing rheumatology in a government setting, Challenges to practicing rheumatology in a small private practice setting, Challenges to working in a large multispecialty organization, Challenges to practicing pediatric rheumatology, Clinical trials in rheumatology, Challenges in having an infusion center, Implementing treatment to target in the clinic, Future directions: implementing new technologies in clinical practice, Possible Challenges in Optimizing Medical Education for Rheumatologists, and the challenges of approaching and managing gout.

Designed to help medical educators implement better assessment methods, tools, and models directly into training programs, Practical Guide to the Evaluation of Clinical Competence, 2nd Edition, by Drs. Eric S. Holmboe, Steven J. Durning, and Richard E. Hawkins, is a hands-on, authoritative guide to outcomes-based assessment in clinical education. National and international experts present an organized, multifaceted approach and a diverse combination of methods to help you perform effective assessments. This thoroughly revised edition is a valuable resource for developing, implementing, and sustaining effective systems for evaluating clinical competence in medical school, residency, and fellowship programs. Each chapter provides practical suggestions and assessment models that can be implemented directly into training programs, tools that can be used to measure clinical performance, overviews of key educational theories, and strengths and weaknesses of every method. Guidelines that apply across the medical education spectrum allow you to implement the book's methods in any educational situation. New chapters on high-quality assessment of clinical reasoning and assessment of procedural competence, as well as a new chapter on practical approaches to feedback. Reorganized for ease of use, with expanded coverage of Milestones/Entrustable Professional Assessments (EPAs), cognitive assessment techniques, work-based procedural assessments, and frameworks. The expert editorial team, renowned leaders in assessment, is joined by global leader in medical education and clinical reasoning, Dr. Steven Durning.

Don't gamble on the most important exam of your career! The Johns Hopkins University was the birthplace of the Internal Medicine residency and has led the field ever since. Now it's also the source of the most effective review tool in the specialty! Seventy respected experts summarize everything you need to know for certification or recertification, focusing on the information you really need. Then, they test your knowledge with 1,950 questions and answers online - more than you'll find in any other internal medicine review tool. The web site offers you a highly realistic exam simulation as well as detailed feedback on your performance. Thoroughly test your knowledge with questions mirroring the content and format of the ABIM exam - far more than you'll find in any other review text View clinical images, many in full color, covering all the image types you'll see on the boards - including x-rays, common skin findings, peripheral blood smear, ophthalmology findings, and CT and MR images Add your own notes in the margins or check off content that you've mastered as you go along. A Web address will be included at the end of every chapter, which make finding the examination questions easy. All content will be revised to include the latest research in the field, ensuring the most relevant information and on-line questions.

Deciding on a career path is difficult for many people. Deciding of the best university, of an interesting and challenging subspecialty, of where to get established, are just a few of the vast challenges you will face in preparing for a successful medical career. Whether you are a medical student, a resident, a family practitioner or a specialist, this book is an essential guide for many if not every facet of your medical career. It is a valuable resource because it covers a wide variety of topics such as choosing a medical school, a residency training program, a type of practice, establishing your practice, surrounding yourself with experts ( accountants, financial advisors, banker and others ), understanding the realities, challenges and up-coming changes in medical practice, preparing for retirement and retiring. Browse to the book as often as you want to refresh your memory, to look at a specific subject.

The main objective of this study is to address the research question04how does a sample of internal medicine residents self-evaluate and what, if any, influence does this have on their academic achievement of medical knowledge? The research builds on and extends our understanding of the self-evaluation process through the moderating effects between competency-related beliefs and academic achievement of medical knowledge. The study design is quantitative, cross-sectional survey research using a non-random sample of 58 internal medicine residents at Henry Ford Hospital in Detroit, Michigan. The primary sources for data collection included a study survey that measured competency-related beliefs as a subjective assessment of predicted performance in combination with the Internal Medicine In-Training Examination (IM-ITE), the objective resource. Findings indicate that residents are not very accurate with their self-evaluations. Residents, as a whole, tend to underestimate their performance. A gender difference was exhibited where female residents predicted their performance significantly lower than their male colleagues. Most significantly, actual performance on the IM-ITE was significantly influenced by the relationship with estimation error.

This follow-up and review book to Dr. Robert Taylor's highly successful FAMILY MEDICINE: PRINCIPALS AND PRACTICE, will become an indispensible study guide for family practice residents preparing for certification exams, practitioners preparing for recertification and medical students during their family practice clerkship. Complete with over 1,200 questions drawn directly from and keyed to family medicine, this question and answer book will provide an extensive review of all the issues confronted by family practitioners in clinical practice.
