This book is a real life story about the beauty of life when you have a wonderful income, which ultimately gave me a glamorous lifestyle. I had a lavished apartment on the Upper East Side of Manhattan, where I was always entertaining my friends and their friends. Sometimes my friends and I would use limousine just for the night out. At the end of my company contract and after about another six months without income, I sold my condominium at a reasonable price and relocated to Jersey City in New Jersey. I lived in a spacious apartment for another five months without income, then I decided to drive a yellow cab. I went to TLC for my hack license to enable me to drive a taxi. I registered with a taxi company in Brooklyn, and I became a taxi driver. Driving the taxi and continuing my job hunting at the same time was daunting. With too many summonses from police officers and TLC inspectors within a period of about four years taxi driving, my license was revoked. No more taxi driving, no more income. And my life became too miserable.

This IBM® Redbooks® publication documents the strength and value of the IBM security strategy with IBM z Systems hardware and software (referred to in this book by the previous product name, IBM System z®). In an age of increasing security consciousness and more dangerous and advanced persistent threats, System z provides the capabilities to address today's business security challenges. This book explores how System z hardware is designed to provide integrity, process isolation, and cryptographic capability to help address security requirements. We highlight the features of IBM z/OS® and other operating systems that offer a variety of customizable security elements. We also describe z/OS and other operating systems and additional software that use the building blocks of System z hardware to meet business security needs. We explore these from the perspective of an enterprise security architect and how a modern mainframe must fit into an enterprise security architecture. This book is part of a three-volume series that focuses on guiding principles for optimized mainframe security configuration within a holistic enterprise security architecture. The intended audience includes enterprise security architects, planners, and managers who are interested in exploring how the security design and features of the System z platform, the z/OS operating system, and associated software address current issues, such as data encryption, authentication, authorization, network security, auditing, ease of security administration, and monitoring.
