2000-2005 State Textbook Adoption - Rowan/Salisbury.

Authored by Paul Hewitt, the pioneer of the enormously successful "concepts before computation" approach, Conceptual Physics boosts student success by first building a solid conceptual understanding of physics. The Three Step Learning Approach makes physics accessible to today's students. Exploration - Ignite interest with meaningful examples and hands-on activities. Concept Development - Expand understanding with engaging narrative and visuals, multimedia presentations, and a wide range of concept-development questions and exercises. Application - Reinforce and apply key concepts with hands-on laboratory work, critical thinking, and problem solving.

Chemistry, Fourth Edition, by Julia Burdge offers a clear writing style written with the students in mind. Julia uses her experience of teaching hundreds of general chemistry students per year and creates content to offer more in-depth explanation in areas where she knows they have problems. Continuing in the Burdge tradition, the fourth edition maintains an outstanding art program, a consistent problem-solving approach, interesting applications woven throughout the chapters, and a wide range of end-of-chapter problems.

In a work that is part memoir, part monograph, Nigel Duffield offers a set of lyrical reflections on theories of Psycholinguistics, which is concerned with how speakers use the languages they control, as well as with how such control is acquired in the first place. Written for professionals and enthusiastic amateurs alike, this book offers a 'well-tempered' examination of the conceptual and empirical foundations of the field. In developing his ideas, the author draws on thirty years of direct professional experience of psycholinguistic theory and practice, across various sub-disciplines, including theoretical linguistics, cognitive psychology, philosophy, and philology. The author's personal experience as a language learner - more importantly, as the father of three bilingual children - also plays a crucial role in shaping the discussion. Using examples from popular literature, song, poetry, and comedy, the work examines many of the foundational questions that divide researchers from different intellectual traditions: these include the nature of 'linguistic competence', the arbitrariness of language, and the theoretical implications of variation between speakers and across languages.
