A feel-good tale of friendship set in the snowy Arctic from the creators of the bestselling, multi-award-winning The Lion Inside and The Koala Who Could. Wilf is as strong and independent as a wolf cub can be. He doesn't need help from his friends and family - whatever it is, he can do it ALL BY HIMSELF. But when Wilf finds himself lost and alone in the snow and chill of an Arctic night, he discovers something important - sometimes we all need the help of a friend to keep us safe and show us the way. Look out for more books by Rachel Bright and Jim Field: The Lion Inside The Koala Who Could The Squirrels Who Squabbled

The purpose of this book is to present up-to-date theory and techniques of statistical inference in a logically integrated and practical form. Essentially, it incorporates the important developments in the subject that have taken place in the last three decades. It is written for readers with background knowledge of mathematics and statistics at the undergraduate level. " Algebra of Vectors and Matrices." "Probability Theory, Tools and Techniques." "Continuous Probability Models." "The Theory of Least Squares and Analysis of Variance." "Criteria and Methods of Estimation." "Large Sample Theory and Methods." "Theory of Statistical Inference." "Multivariate Analysis.

A brilliantly funny, rhyming read-aloud picture book - jam-packed with animals and silliness! From the bestselling, multi-award-winning creators of Oi Frog! Oi! Where are duck-billed platypuses meant to sit? And Kookaburras and hippopotamuses and all the other animals with impossible to rhyme with names... Over to you Frog! The laughter never ends with Oi Frog and Friends Praise for Oi Frog!: 'An absolute treat.' - Daily Mail 'Everyone will love it.' - Guardian Oi Frog and Friends is a Top Ten Bestselling series. Oi Dog! won the 2017 Laugh Out Loud Awards (among others). And Oi Goat! was a 2018 World Book Day Book.

"Wherever this little boy goes, his worry monster follows. Can he learn how to leave his monster behind?" -- Cover.

The application of solid-state detectors of high energy resolution to x-ray spectrometry, and the increasing use of computers in both measurement and data evaluation, are giving a new stimulus to x-ray techniques in analytical chemistry. The Twentieth Annual Denver X-ray Conference reflects this renewed interest in several ways. The invited papers, grouped in Session I, review the characteristics of the detectors used in the measurement of x-rays. One paper is dedicated to the detection of single ions. Although such a subject may appear to be marginal to the purposes of the Denver Conference, we must recognize the affinity of techniques applied to similar purposes. Ion probe mass spectrometry is dedicated to tasks similar to those performed by x-ray spectrometry with the electron probe microanalyzer. Scientists and technologists will see these two techniques discussed in the same meetings. The discussion of automation and programming is not limited to the two invited speakers, but extends to papers presented in more than one session. The matter of fluorescence analysis by isotope- and tube-excitation will also be of great interest to those concerned with the practical applications of x-ray techniques. The communications contained in this volume, and the lively discussions which frequently followed the presentation of papers, attest to the vitality of the subjects which are the concern of the Annual Denver X-ray Conference.

Astrobiology is the study of the origin, evolution, distribution, and future of life in the universe. It is an inherently interdisciplinary field that encompasses astronomy, biology, geology, heliophysics, and planetary science, including complementary laboratory activities and field studies conducted in a wide range of terrestrial environments. Combining inherent scientific interest and public appeal, the search for life in the solar system and beyond provides a scientific rationale for many current and future activities carried out by the National Aeronautics and Science Administration (NASA) and other national and international agencies and organizations. Requested by NASA, this study offers a science strategy for astrobiology that outlines key scientific questions, identifies the most promising research in the field, and indicates the extent to which the mission priorities in existing decadal surveys address the search for life's origin, evolution, distribution, and future in the universe. This report makes recommendations for advancing the research, obtaining the measurements, and realizing NASA's goal to search for signs of life in the universe.

Everything is made of stuff. Some things are made of paper, like this book. And some things are made of PLASTIC. If you look around you, plastic is everywhere. Even in places where it's not meant to be. If it drops to the ground, it doesn't rot away - it sticks around for ever. Our world is drowning in plastic, and it's a big problem. Award-winning author-illustrator Neal Layton is here to explain where plastic comes from, why it doesn't biodegrade, and why that's dangerous for animals and humans alike. But he's also FULL of ideas for how you can help! From giving up straws in juice cartons to recycling all we can and taking part in a beach clean, A Planet Full of Plastic will get young readers excited about how they can make a difference to keep Planet Earth happy. This brilliant non-fiction picture book, illustrated in Neal's trademark collage style, is perfect for readers aged 5-7 who love nature and want to help the environment.

Develop your grade 7 students sentence editing, punctuation, grammar, vocabulary, word study, and reference skills using 180 focused 10- to 15-minute daily activities.

This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is moreextensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

Reading a new Socratic dialogue that reflects a time traveler's argument to the great philosopher that he can escape death by traveling to the future, graduate student Sierra is astonished when the elderly scholar who showed her the document disappears, an event that prompts her search for answers through time with the help of her boyfriend, Max. 10,000 first printing.
