Social Systems by Niklas Luhmann - [goodreads.com](https://www.goodreads.com/book/show/1151111.Social_Systems)

Luhmann concedes that there is no longer a binding representation of society within society, but refuses to describe this situation as a loss of legitimation or a crisis of representation. Instead, he proposes that we search for new ways of coping with the enforced selectivity that marks any self-description under the conditions of functionally differentiated modern society.

sociology with a genealogy of his own, which includes a cybernetician (Heinz von Foerster), two evolutionary biologists (Humberto R. Maturana and Francisco Varela), and an obscure mathematician (George Spencer Brown), not to speak of the Devil Himself. This list of names defines a set of problems that explodes the boundaries of sociology by linking social theory to recent theoretical developments in scientific disciplines as diverse as modern physics, information theory, general systems theory, neurophysiology, phenomenology, and cognitive science. In these fields, the erosion of classical paradigms suggests, not the end of science, but a fundamental revision of its theoretical premises."--BOOK JACKET. This book provides an insight into the ideas of one of the world's greatest sociologists: Niklas Luhmann. It explains, in clear and concise language, the basic concepts of Social Systems Theory and their application to the specific case of the Education System, which was considered by Luhmann as a primary subsystem of modern society. It illustrates the complex and sophisticated thinking that characterises Luhmann's work and explains that Luhmann's theory has given an important and original contribution to the study of education from a sociological point of view. His contribution has some resonance in recent social constructionist and relational approaches to education, as well as in studies of educational interaction. In addition, research methodologies, in particular mixed methods strategies, draw heavily on epistemological issues. The book finally argues that educationists can appreciate the extent of

Luhmann's contribution to the field of education, although their perspective cannot be fully harmonised with, nor reduced to, the sociological one. This divergence of perspectives can stimulate pedagogy to call into question its conceptual framework as well its approach to social situations in the classroom.

This is the definitive analysis of art as a social and perceptual system by Germany's leading social theorist of the late 20th century. It combines three decades of research in the social sciences, phenomenology, evolutionary biology, cybernetics, and information theory with an intimate knowledge of art history, literature, aesthetics, and contemporary literary theory.

However, unlike conventional legal theory, this volume seeks to

provide an answer in terms of a general social theory: a methodology that answers this question in a manner applicable not only to law, but also to all the other complex and highly differentiated systems within modern society, such as politics, the economy, religion, the media, and education. This truly sociological approach offers profound insights into the relationships between law and all of these other social systems.

Niklas Luhmann ranks as one of the most important sociologists and social theorists of the twentieth century. Through his many books he developed a highly original form of systems theory that has been hugely influential in a wide variety of disciplines. In *Introduction to Systems Theory*, Luhmann explains the key ideas of general and sociological systems theory and supplies a wealth of

examples to illustrate his approach. The book offers a wide range of concepts and theorems that can be applied to politics and the economy, religion and science, art and education, organization and the family. Moreover, Luhmann's ideas address important contemporary issues in such diverse fields as cognitive science, ecology, and the study of social movements. This book provides all the necessary resources for readers to work through the foundations of systems theory – no other work by Luhmann is as clear and accessible as this. There is also much here that will be of great interest to more advanced scholars and practitioners in sociology and the social sciences.

School), language: English, abstract: This paper introduces the theory of social functional systems by Niklas Luhmann who is a great representative of systems theory in sociology. As his theory is based on the concept of autopoiesis, the original autopoiesis concept of Maturana and Valdera is shortly demonstrated as well as the way of how Luhmann shaped it into a general autopoiesis concept. This general introduction is followed by a detailed explanation of ideas of Luhmann's social systems theory. As his theory is communication-based rather than action-based, the element of communication is further explored. Additionally, the social systems of society, organization and interaction are defined whereas the main focus is on society as social system. Within this context, several subsystems of society are explicated together with their appropriate coding, program, medium and function. Furthermore,

the idea of structural coupling which can be described as relation between systems and their environments is implemented. After having a complete picture of the theory, the paper focuses on the practical example of Apple and the problems within its supply chain. This scandal is analyzed according to Luhmann's social systems theory. As a last step, the role of ethics and morality within social systems theory are evaluated on basis of the Apple case. The paper finishes with a critical evaluation of Luhmann's whole theory which also includes important criticism.

This book discusses the designs and applications of the social systems theory (built by Niklas Luhmann, 1927–1998) in relation to empirical socio-legal studies. This is a sociological and legal theory known for its highly complex and abstract conceptual apparatus.

But how to change its scale in order to study more localised phenomena, and to deal with empirical data, such as case law, statutes, constitutions and regulation? This is the concern of a wide variety of scholars from many regions engaged in this volume. It focuses on methodological discussions and empirical examples concerning the innovations and potentials that functional and systemic approaches can bring to the study of legal phenomena (institutions building, argumentation and dispute-settlement), in the interface with economy and regulation, and with politics and public policies. It also discusses connections and contrasts with other jurisprudential approaches – for instance, with critical theory, law and economics, and traditional empirical research in law. Two decades after Luhmann's death, the 21st century has brought countless transformations in technologies and institutions. These

changes, resulting in a hyper-connected, ultra-interactive world society bring operational and reflective challenges to the functional systems of law, politics and economy, to social movements and protests, and to major organisational systems, such as courts and enterprises, parliaments and public administration. Pursuing an empirical approach, this book details the variable forms by which systems construct their own structures and semantics and 'irritate' each other. Engaging Luhmann's theoretical apparatus with empirical research in law, this book will be of interest to students and researchers in the field of socio-legal studies, the sociology of law, legal history and jurisprudence.

year theoretical project to reconceptualize sociology, it offers a comprehensive description of modern society on a scale not attempted since Talcott Parsons. Beginning with an account of the fluidity of meaning and the accordingly high improbability of successful communication, Luhmann analyzes a range of communicative media, including language, writing, the printing press, and electronic media as well as "success media," such as money, power, truth, and love, all of which structure this fluidity and make communication possible. An investigation into the ways in which social systems produce and reproduce themselves, the book asks what gives rise to functionally differentiated social systems, how they evolve, and how social movements, organizations, and patterns of interaction emerge. The advent of the computer and its networks, which trigger potentially far-reaching

processes of restructuring, receive particular attention. A concluding chapter on the semantics of modern society's self-description bids farewell to the outdated theoretical approaches of "old Europe," that is, to ontological, holistic, ethical, and critical interpretations of society, and argues that concepts such as "the nation," "the subject," and "postmodernity" are vastly overrated. In their stead, "society"—long considered a suspicious term by sociologists, one open to all kinds of reification—is defined in purely operational terms. It is the always uncertain answer to the question of what comes next in all areas of communication.

A Systems Theory of Religion, still unfinished at Niklas Luhmann's death in 1998, was first published in German two years later thanks to the editorial work of André Kieserling. One of Luhmann's most

important projects, it exemplifies his later work while redefining the subject matter of the sociology of religion. Religion, for Luhmann, is one of the many functionally differentiated social systems that make up modern society. All such subsystems consist entirely of communications and all are "autopoietic," which is to say, self-organizing and self-generating. Here, Luhmann explains how religion provides a code for coping with the complexity, opacity, and uncontrollability of our world. Religion functions to make definite the indefinite, to reconcile the immanent and the transcendent. Synthesizing approaches as disparate as the philosophy of language, historical linguistics, deconstruction, and formal systems theory/cybernetics, *A Systems Theory of Religion* takes on important topics that range from religion's meaning and evolution to secularization, turning decades of sociological
